Radiology Reports

- Radiology folders are organized by radiology test type
- Information is displayed as received from sending facility
- Unread reports are displayed in bold
- Findings section includes Report History and Access History

Chest CT [TRIN] (14 years ago)

Performed Apr-19-2006 22:00 Order Number CHESTCT1h13
 Ordering Dr Timothy Orange Status Final
 Provider

Findings Final

CT sections show a poorly defined thick walled lesion involving the anterior and superior lingular segments of the left upper lobe. The surrounding lung parenchyma shows areas of consolidation. Mediastinal structures normal. Possible lymph node enlargement seen. Soft tissue and fluid attenuation values noted within the lesion. A few specks of calcific density also imaged in the wall of the lesion, and show enhancement following contrast administration. No pleural effusion/ pleural thickening noted.
